What you need to know about NEK Broadband:

We are a **Community Owned**, publicly accountable broadband provider. Every town in the NEK (plus Wolcott) are members and have a voice.

We are committed to delivering **fast, reliable internet service to every unserved address with utility poles**. Our customers will have internet speeds fast enough to meet the needs of generations to come.

By the end of 2024, we will begin providing service in parts of 45 of our member towns across the NEK. Initial construction focused on “backbone” of our fiber-optic network to maximize reliability of services for the entire district while serving locations along the way.

We want a local workforce to help build, operate and manage the network this year and into the future. **We are hiring.**

Pre-register at get.nekbroadband.org to get general updates and notices when new service is available for your address.
